Copiamos el archivo en formato JSON en la ruta `C:\MongoDB\dataset` en este caso es `ventachanse.json`

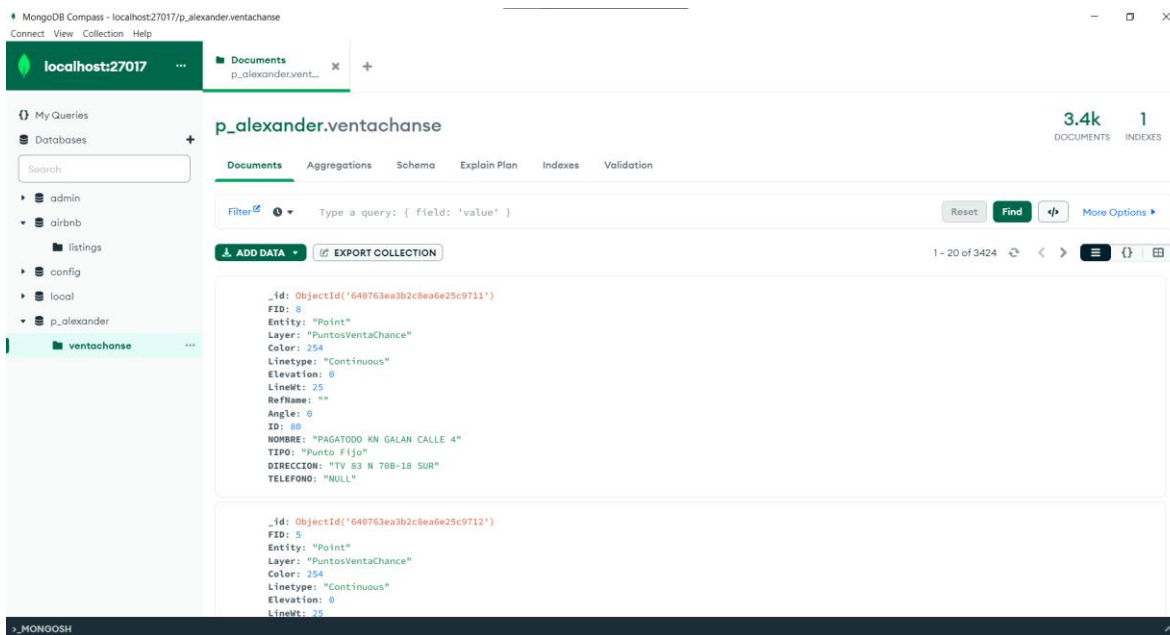

Con el comando `mongoimport.exe --db p_alexander --collection ventachanse --file C:\MongoDB\dataset\ventachanse.json --jsonArray` creamos la base de datos en este caso `p_alexander` y importamos el archivo en formato JSON

```
C:\MongoDB\Server\5.0\bin>mongoimport.exe --db p_alexander --collection ventachanse --file C:\MongoDB\dataset\ventachanse.json --jsonArray
2023-03-07T11:18:49.920-0500 connected to: mongod://localhost/
2023-03-07T11:18:50.239-0500 3424 document(s) imported successfully. 0 document(s) failed to import.
```

Verificamos que la base de datos se creo con el comando show dbs

```
> show dbs
admin          0.000GB
airbnb         0.051GB
config         0.000GB
local          0.000GB
p_alexander    0.000GB
```

Verificamos que la base de dato fue creada y el archivo JSON fueron cargados correctamente

Con el comando “use” y el nombre de la base de datos creada en este caso es p_alexander

```
>
> use p_alexander
switched to db p_alexander
```

En un CMD nos dirigimos a la ruta C:\MongoDB\Server\5.0\bin y ejecutamos el comando mongo.exe para realizar la conexión a mongod

  Enable MongoDB's free cloud-based monitoring service, which will then receive and display
  metrics about your deployment (disk utilization, CPU, operation statistics, etc).

  The monitoring data will be available on a MongoDB website with a unique URL accessible to you
  and anyone you share the URL with. MongoDB may use this information to make product
  improvements and to suggest MongoDB products and deployment options to you.

  To enable free monitoring, run the following command: db.enableFreeMonitoring()
  To permanently disable this reminder, run the following command: db.disableFreeMonitoring()
```

Con el comando show collections ventachanse accedemos donde se encuentra cargado nuestro JSON

Después de realizar las modificaciones el HTML procedemos a realizar la carga al repositorio

Con el comando Git status verificamos los cambios que se realizaron localmente

Con el comando git commit -m "Proyecto" le asignamos un nombre al cambio que vamos a cargar al repositorio.

Con el comando `git push` cargamos los cambios al repositorio

```
